Pros & Cons

Pros

- * Gain new knowledge
- * Encourages collaborative learning

Cons

- * Tags are ambiguous, imprecise
- * Often are single words

All about CiteULike

Read all about it

CiteULike is a free service to help academics to share, store, and organise the academic papers they are reading. When you see a paper on the web that interests you, you can click one button and have it added to your personal library. CiteULike automatically extracts the citation details, so there's no need to type them in yourself. It all works from within your web browser. There's no need to install any special software.

Because your library is stored on the server, you can access it from any computer. You can share your library with others, and find out who is reading the same papers as you. In turn, this can help you discover literature which is relevant to your field but you may not have known about.

You're currently looking at a list of the last few papers submitted by all the CiteULike users. Why not [register](#) for a free account today and start organising your collection and see just the articles you're interested in? All we need is your email address, a username, and a password. It should take less than fifteen seconds.

Alternatively, you can read [more about CiteULike](#).

Note: This process is completely safe and reversible. If you don't like the service, you can just remove the bookmarklet. It is **not** a toolbar which needs to be installed, contains no malicious software to try to collect personal information, will not damage your computer, and will not try to spam you to see if you're interested in buying Viagra or a discount-rate university degree certificate

Step 2

Look for the article you want to add on one of the following supported sites:
